

## ENGLISH:

The university of the future will have to be more than a stopover for students headed somewhere else. I'm completely convinced that regular, fresh input is tremendously important in our increasingly complex world.

This is why we founded the TUM Institute for LifeLong Learning (<https://www.tum.de/en/lifelong-learning>), which expands our classic educational mission to include the dimension of continuing university-level education for experts and executives.

In 2021, the Institute's first year, over 2000 people successfully completed one of our Executive or Professional Master's or certificate programs. Here we connect management and leadership skills with technological expertise, e.g. Building Information Modeling in construction, Digital Twins in urban planning and the Internet of Things in the agricultural sector.

The Institute is thus a lifelong educational partner to professionals from industry as well as to our own colleagues right here at TUM.
