

Technological Sovereignty in Communication Networks

Prof. Dr.-Ing. Wolfgang Kellerer

Thinknet 6G Summit

Munich, Germany

Oct. 17, 2024

This work receives financial support by the Federal Ministry of Education and Research of Germany (BMBF) in the programme of "Souverän. Digital. Vernetzt." joint project 6G-life, project identification number 16KISK002, and the Bavarian Ministry of Economic Affairs, Regional Development and Energy as part of the project "6G Future Lab Bavaria".

How does sovereignty affect network operators?

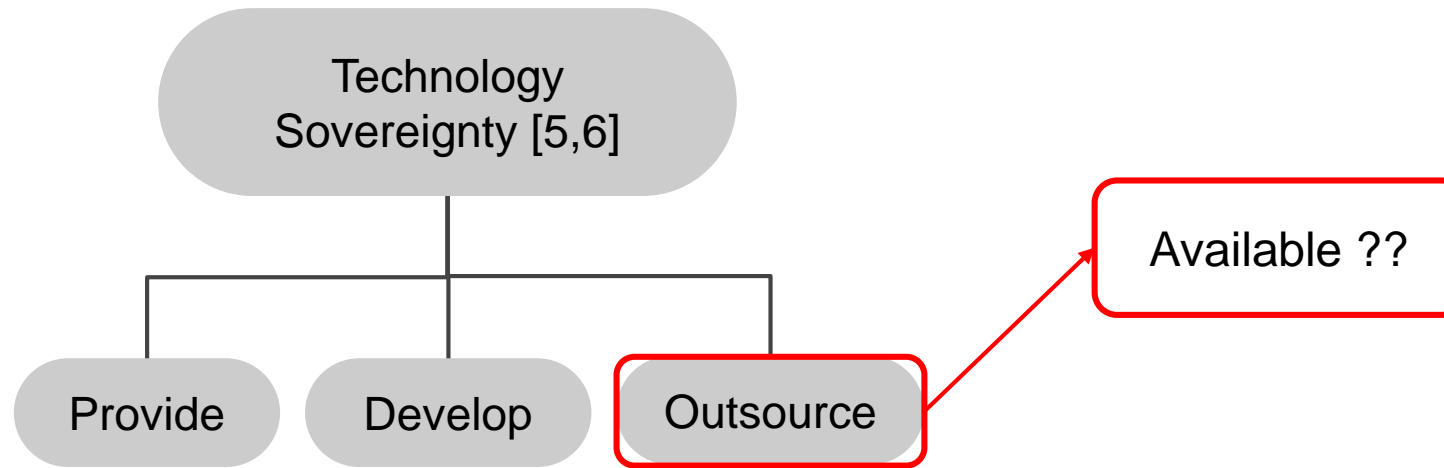

The screenshot shows the top portion of a news article on the La Vanguardia website. The header includes the site name 'LA VANGUARDIA' and a navigation menu with categories like 'POCKET / PERSONAL FINANCE / ENTREPRENEURS / INNOVATION / LEGAL / FREE ZONE CONSORTIUM'. A yellow 'SUBSCRIBE' button is visible. The article is categorized under 'Economy' and 'TELECOMMUNICATIONS'. The main headline reads 'The Government launches the call for rural 5G with anti-Chinese clause'. A bullet point below the headline states: '• The Executive also prevents an operator from monopolizing more than between 30 and 35 provinces'.

If a supplier is declared “high risk” the operator will have to change the material at his own expense.

What is sovereignty in networks?

Sovereignty = Ability of an institution to provide a service **without any structural dependencies**.

[5] Edler, Jakob, et al. Technology Sovereignty: from demand to concept. No. 02/2020. Perspectives-Policy Brief, 2020.

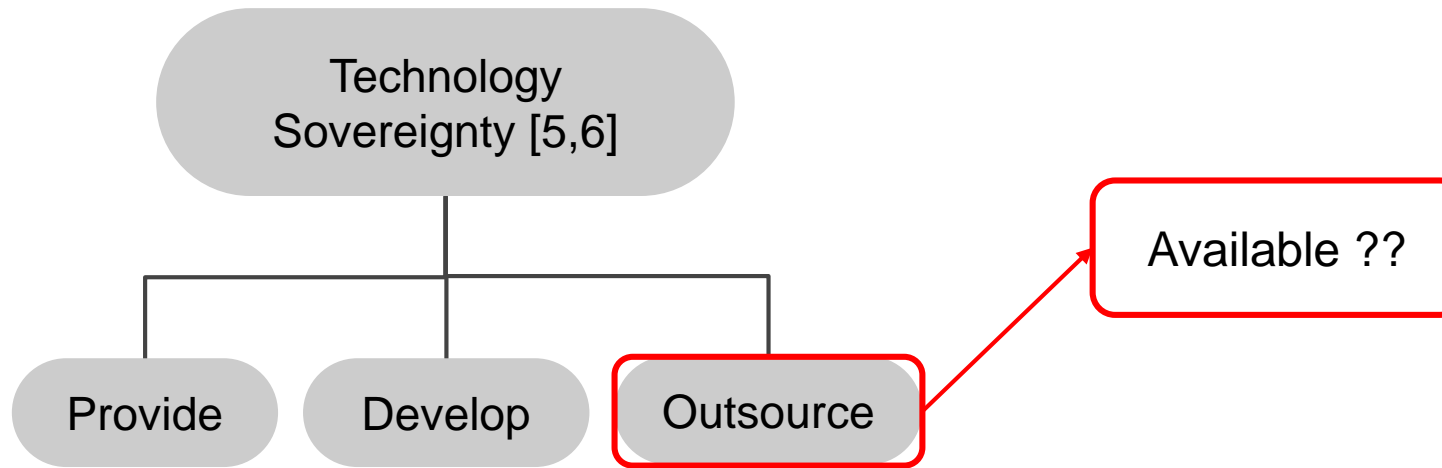

[6] Weber, Arnd, et al. "Sovereignty in information technology." Security, safety and fair market access by openness and control of the supply chain. Karlsruhe: KIT-ITAS, 2018.

Our contribution

1. A novel metric to capture network sovereignty
 - Network planning besides availability
2. Realization of network sovereignty
 - An end-to-end cellular system based on products of three local startups (see demo tomorrow)

What is sovereignty in networks?

Sovereignty = Ability of an institution to provide a service **without any structural dependencies**.

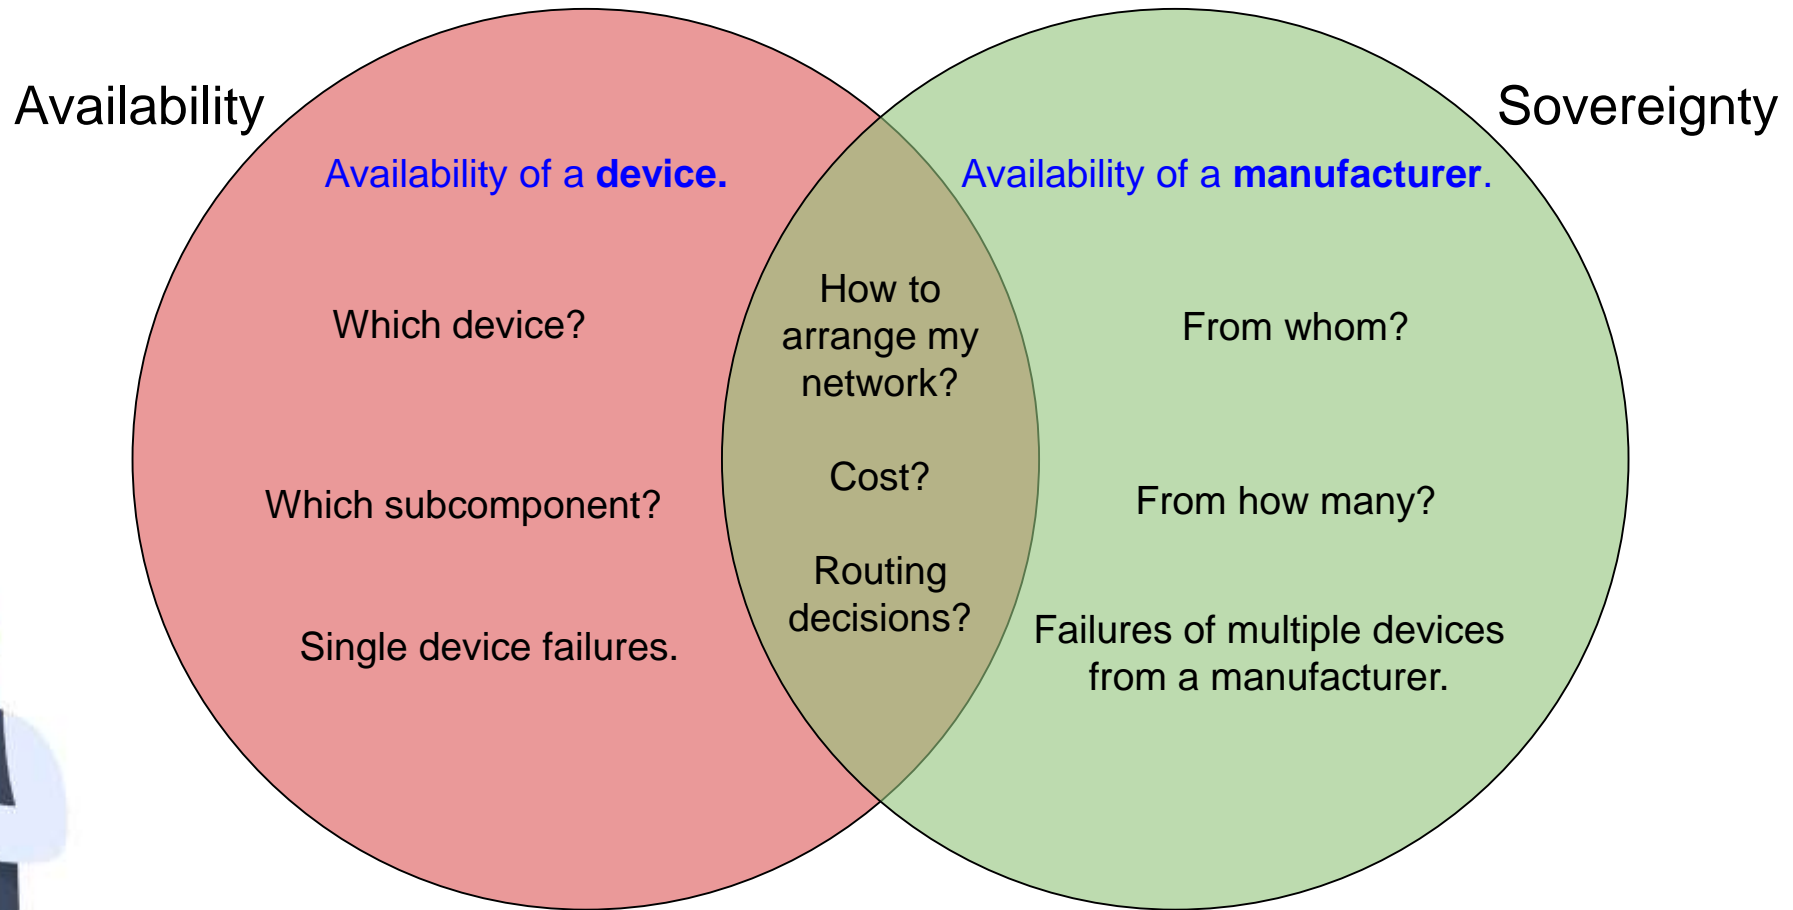

Availability = Probability that a device delivers its service at a particular time instant.

Reliability = Ability of a device to deliver uninterrupted service over a period of time.

[5] Edler, Jakob, et al. Technology Sovereignty: from demand to concept. No. 02/2020. Perspectives-Policy Brief, 2020.

[6] Weber, Arnd, et al. "Sovereignty in information technology." Security, safety and fair market access by openness and control of the supply chain. Karlsruhe: KIT-ITAS, 2018.

Availability vs Sovereignty

Network operator

Are they the same?

Availability vs Sovereignty

For all components,
 $A = 0.999$

RBD

$A_F = 0.997998006$

Availability	0.998
Sovereignty	-

Availability vs Sovereignty

- $A = 0.999$
- $A = 0.999$
- $A = 0.999$

RBD

Now,
 $A_F = 0.984985973$
 Previous case:
 $A_F = 0.997998006$

Availability	0.998
Sovereignty	+

→ A special attribute of dependability

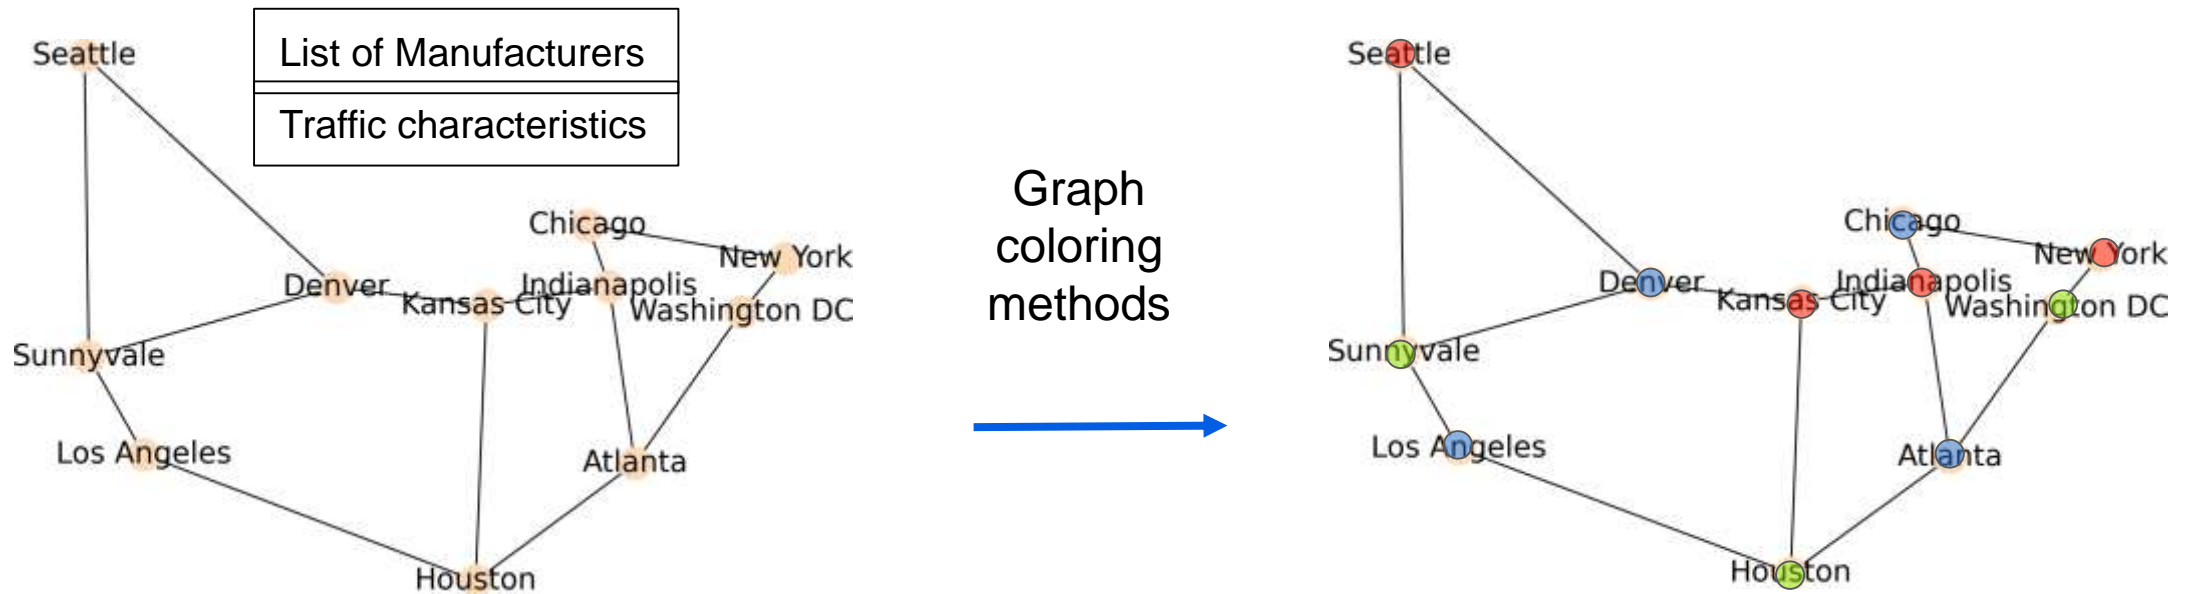

For communication networks, we define network sovereignty as a network operator's ability to operate a network without any dependencies on component manufacturers

Example application of network sovereignty

Manufacturer Assignment for Sovereignty (MAS) problem

Given a network, the expected traffic, the number of manufacturers in the market,

What is the best manufacturer assignment possible such that the impact of manufacturer failures is minimized?

Path Set Diversity Score (PSD Score)

Path no.	Path	M in Path		s = 1 / M in path
		Label	Number	
1	S-A-T	Y	1	1/1
2	S-B-T	R	1	1/1
3	S-C-T	B	1	1/1
4	S-D-E-T	Y,B	2	1/2
5	S-F-G-T	B,R	2	1/2
6	S-H-I-T	R,Y	2	1/2
7	S-J-K-L-T	Y,B,R	3	1/3
PSD Score for flow from S to T				4.83

Path Set Diversity Score (PSD Score)

Path no.	Path	M in Path		s = 1 / M in path
		Label	Number	
1	S-F-T	R	2	1/2
2	S-A-D-T	R,B	2	1/2
3	S-B-E-T	Y,B	2	1/2
4	S-C-E-T	Y,B	Removed, redundant to Path 3	
5	S-A-B-E-T	R,Y,B	3	1/3
6	S-B-A-D-T	Y,R,B	Removed, redundant to Path 5	
7	S-C-E-B-A-D-T	Y,R,B	Removed, redundant to Path 5	
PSD Score for flow from S to T				2.33

Path set approach - Initial Results, Abilene Topology

Naga is our algorithm to plan for network sovereignty

Naga outperforms all heuristics for any number of manufacturers.

Results are consistent across other topologies.

|M| : number of manufacturers

[7] S. Janardhanan, M. Samonaki, P. E. Heegaard, W. Kellerer and C. Mas-Machuca, "Network Sovereignty: A Novel Metric and Its Application on Network Design," in IEEE Transactions on Reliability, 2024, doi: 10.1109/TR.2024.3434560.

How can we improve network sovereignty in practice?

Increase reliability and trustworthiness of manufacturers - local manufacturers!
