

R-code for Chapter 1: Multivariate distributions and copulas

Claudia Czado

01 March, 2019

Contents

Required R packages	1
Section 1.1 Univariate distributions	2
Figure 1.1: Univariate densities: normal and Student t distribution with nu=3	2
Section 1.2 Multivariate distributions	3
Figure 1.2: Histograms: (top row) of a standard normal random sample of size 100 (left) and 500 (right) and their associated PIT values using the empirical distribution function (middle row) and the standard normal distribution function (bottom row).	3
Figure 1.3: Bivariate densities and contour lines: left: bivariate normal with zero means, unit variances and rho = .8, middle: contour lines for bivariate normal with rho = :8 (solid lines) and bivariate standard Student t with nu = 3; rho = .8(dotted lines) and right: bivariate standard Student t with nu = 3 and rho = .8.	5
Section 1.3: Features of multivariate data	7
Ex 1.9: Chemical components of wines	7
Figure 1.4: WINE3: top row: marginal histograms left: acf, middle: acv, right: acc; middle row: pairs plots left: acf versus acv, middle: acf versus acc, right: acv versus acc. bottom row: normalized pairs plots left: acf versus acv, middle: acf versus acc, right: acv versus acc. . . .	8
Figure 1.5: WINE3: top row: marginal histograms of the copula data (left: acf, middle: acv, right: acc), bottom row: pairs plots of the copula data (left: acf versus acv, middle: acf versus acc, right: acv versus acc).	9
Section 1.5: Elliptical copulas	10
Gauss and Student t copulas objects with common Kendall's tau=.7 (rho=.89)	10
Figure 1.6: Bivariate copula densities: left: GaussGauss copula density surface with rho=.89 . . .	10
Section 1.8: Meta distributions	13
Figure 1.7: Scatter plots of a bivariate sample (n = 200) from Gaussian meta distributions: left: N (0, 1)/exponential with rate lambda = 5 margins, middle: uniform[0, 1]/uniform[0, 1] margins, right: N (0, 1)/N (0, 1) margins. The common copula is a bivariate Gauss copula with rho = .88.	13
Section 1.10: Exercises	14
Figure 1.8: WINE7: Scatter plots of the seven dimensional red wine data.	14

Required R packages

- VineCopula
- rafalib
- copula

- mvtnorm
- lattice

Section 1.1 Univariate distributions

Figure 1.1: Univariate densities: normal and Student t distribution with $\nu=3$

```
x<-seq(-3,4,length=100)
n01.pdf<-dnorm(x)
n12.pdf<-dnorm(x,mean=1,sd=2)
t3.pdf<-dt(x,df=5)
ry=range(n01.pdf,n12.pdf,t3.pdf)
bigpar(1,1)
plot(x,n01.pdf,type="l",ylab="density",lty=1,ylim=ry)
par(new=TRUE)
plot(x,n12.pdf,type="l",ylab="density",lty=2,ylim=ry)
par(new=TRUE)
plot(x,t3.pdf,type="l",ylab="density",lty=3,ylim=ry)
abline(v=0,lty=2)
abline(v=1,lty=2)
legend(2,.4,legend = c("N(0,1)", "N(1,2)", "t_3(0,1)"),lty=1:3)
```

Section 1.2 Multivariate distributions

Figure 1.2: Histograms: (top row) of a standard normal random sample of size 100 (left) and 500 (right) and their associated PIT values using the empirical distribution function (middle row) and the standard normal distribution function (bottom row).

```
rnorm100<-rnorm(100)
rnorm500<-rnorm(500)
pit100<-pnorm(rnorm100)
pit500<-pnorm(rnorm500)
u100<-rank(rnorm100)/101
u500<-rank(rnorm500)/501
mypar(3,2)
hist(rnorm100,main="",xlab="x")
hist(rnorm500,main="",xlab="x")
hist(u100,main="",xlab="u")
hist(u500,main="",xlab="u")
hist(pit100,main="",xlab="u")
hist(pit500,main="",xlab="u")
```

Figure 1.3: Bivariate densities and contour lines: left: bivariate normal with zero means, unit variances and $\rho = .8$, middle: contour lines for bivariate normal with $\rho = .8$ (solid lines) and bivariate standard Student t with $\nu = 3$; $\rho = .8$ (dotted lines) and right: bivariate standard Student t with $\nu = 3$ and $\rho = .8$.

Figure 1.3 (left panel)

```
g <- expand.grid(x = seq(-3,3,length=40), y = seq(-3,3,length=40))
g$z<-dmvnorm(cbind(g$x,g$y),sigma=matrix(c(1,0.8,0.8,1),nrow=2,ncol=2))
trellis.par.set("axis.line",list(col=NA,lty=1,lwd=1))
wireframe(z ~ x * y, data = g,scales = list(arrows = FALSE),xlab="x1",drape=FALSE,
perspective = FALSE, colorkey = FALSE,ylab="x2",zlab="x3")
```

Figure 1.3 (right panel)

```
gt<- expand.grid(x = seq(-3,3,length=40), y = seq(-3,3,length=40))
df=3
Sigma=matrix(c(1,.8,.8,1),nrow=2,ncol=2)
S=Sigma*(df-2)/df
```

```

S=Sigma
gt$z<-dmvt(cbind(gt$x,gt$y),df=df,sigma=S,log=FALSE)
#head(gt$z)
trellis.par.set("axis.line",list(col=NA,lty=1,lwd=1))
wireframe(z ~ x * y, data = gt,scales = list(arrows = FALSE),xlab="x1",drape=FALSE,
perspective = FALSE, colorkey = FALSE,ylab="x2",zlab="x3")

```

Figure 1.3 (middle panel)

```

x=seq(-4,4,length=40)
y=x
df=3
Sigma=matrix(c(1,.8,.8,1),nrow=2,ncol=2)
S=Sigma*(df-2)/df
S=Sigma
dmt1<-function(x,y){dmvt(cbind(x,y),df=df,sigma=S,log=FALSE)}
dmnorm1<-function(x,y){dmvnorm(cbind(x,y),sigma=Sigma)}
z=outer(x,y,dmnorm1)
zt=outer(x,y,dmt1)
contour(x,y,z,levels=c(0.001,0.01,.1))
par(new=T)

```

```
contour(x, y, zt, levels=c(0.001,.01,.1), lty=2, col=2)
```

Section 1.3: Features of multivariate data

Ex 1.9: Chemical components of wines

Read in data and set column names

```
#reddata<-read.csv(file="C:/Users/cczado/LRZ Sync+Share/vineweb2019/winequality-red.csv", sep=";")  
#reddata<-read.csv(file="/home/cczado/linux/Desktop/LRZ Sync+Share/vineweb2019/winequality-red.csv", sep=";")  
reddata<-read.csv(file="winequality-red.csv", sep=";")  
n<-length(reddata[,1])  
colnames(reddata)<-c("acf", "acv", "acc", "sugar", "clor", "sf", "st", "den", "ph", "sp", "alc", "quality")
```

Transform original data to copula data (udata) using ranks and then to marginal normalized data (zdata)

```
udata<-reddata  
zdata<-reddata
```

```

for(i in 1:12){
  udata[,i]<-rank(reddata[,i])/(n+1)
  zdata[,i]<-qnorm(udata[,i])
}

```

Figure 1.4: WINE3: top row: marginal histograms left: acf, middle: acv, right: acc; middle row: pairs plots left: acf versus acv, middle: acf versus acc, right: acv versus acc. bottom row: normalized pairs plots left: acf versus acv, middle: acf versus acc, right: acv versus acc.

```

bigpar(3,3)
hist(reddata[,1],main="",xlab="acf")
hist(reddata[,2],main="",xlab="acv")
hist(reddata[,3],main="",xlab="acc")
plot(reddata[,1],reddata[,2],pch=".", cex=3,xlab="acf",ylab="acv",
main="")
plot(reddata[,1],reddata[,3],pch=".", cex=3,xlab="acf",
ylab="acc",main="")
plot(reddata[,2],reddata[,3],pch=".", cex=3,xlab="acv",
ylab="acc", main="")
plot(zdata[,1],zdata[,2],pch=".", cex=3,xlab="acf(normalized)",ylab="acv(normalized)",
main="")
plot(zdata[,1],zdata[,3],pch=".", cex=3,xlab="acf(normalized)",
ylab="acc(normalized)",main="")
plot(zdata[,2],zdata[,3],pch=".", cex=3,xlab="acv(normalized)",
ylab="acc(normalized)", main="")

```

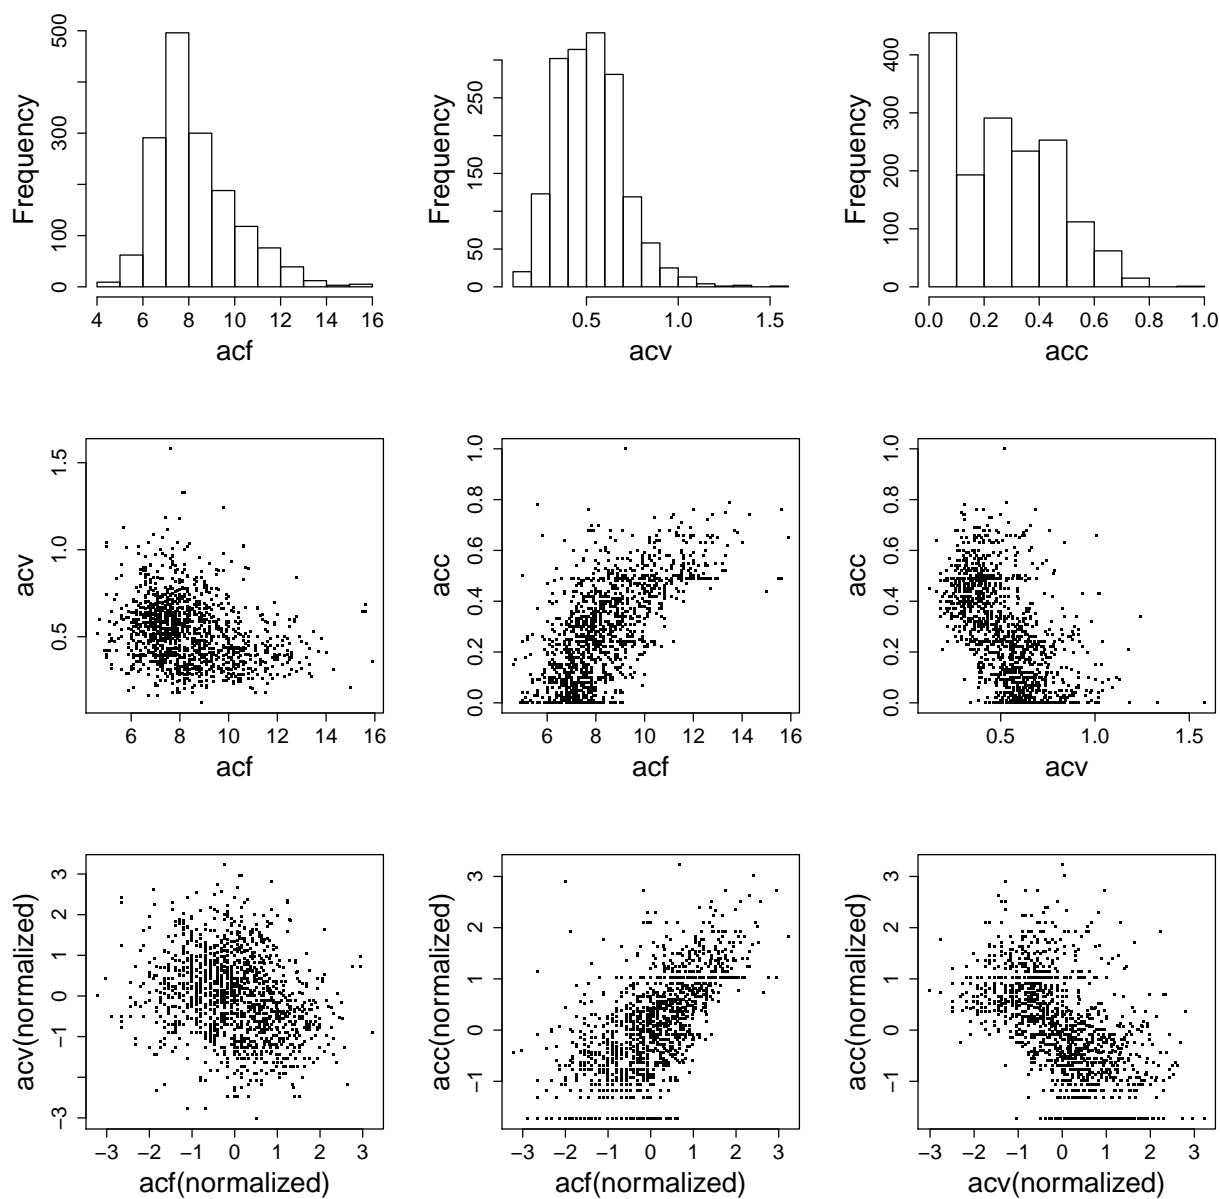

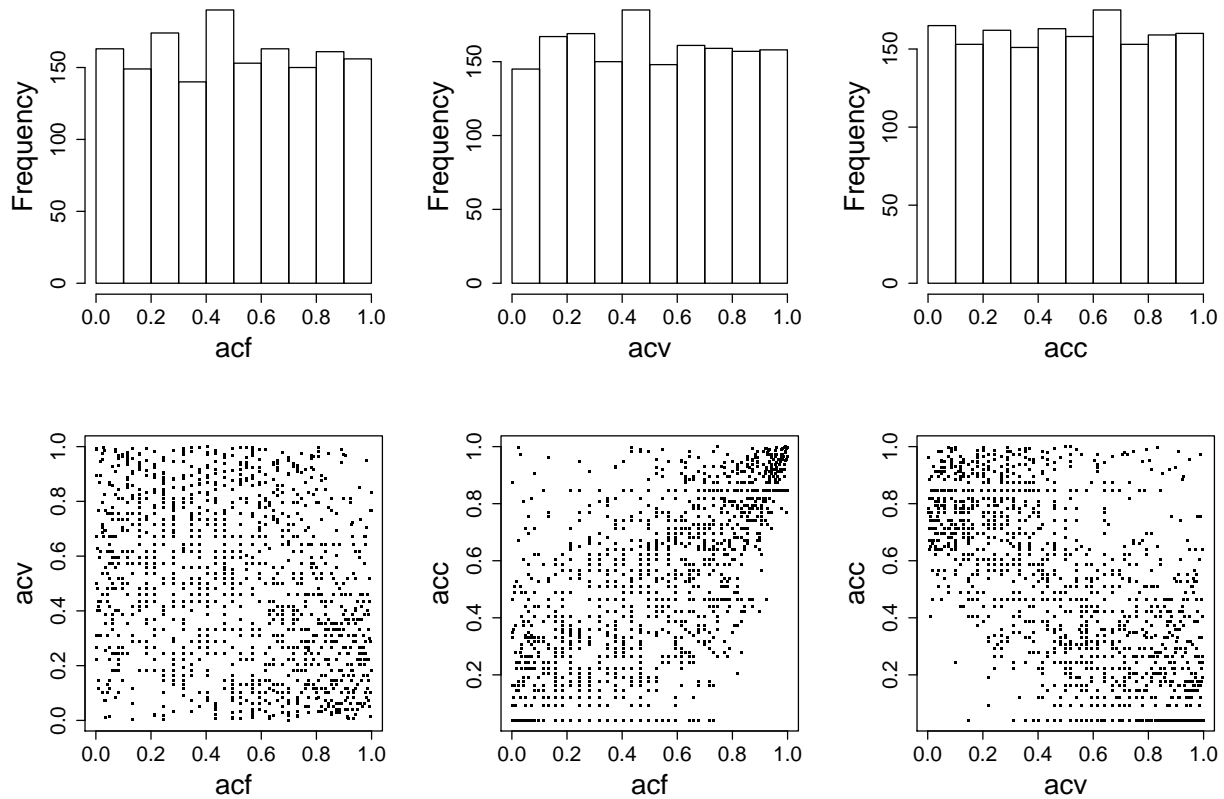

Figure 1.5: WINE3: top row: marginal histograms of the copula data (left: acf, middle: acv, right: acc), bottom row: pairs plots of the copula data (left: acf versus acv, middle: acf versus acc, right: acv versus acc).

```
bigpar(2,3)
hist(udata[,1],main="",xlab="acf")
hist(udata[,2],main="",xlab="acv")
hist(udata[,3],main="",xlab="acc")
plot(udata[,1],udata[,2],pch=".", cex=3,xlab="acf",ylab="acv",
main="")
plot(udata[,1],udata[,3],pch=".", cex=3,xlab="acf",
ylab="acc",main="")
```

```
plot(udata[,2],udata[,3],pch=".", cex=3,xlab="acv",
ylab="acc", main="")
```

Section 1.5: Elliptical copulas

Gauss and Student t copulas objects with common Kendall's tau=.7 (rho=.89)

```
par.gauss<-BiCopTau2Par(1, .7, check.taus = TRUE)
par.st3<-BiCopTau2Par(1, .7, check.taus = TRUE)
par.st8<-BiCopTau2Par(1, .7, check.taus = TRUE)
obj.gauss <- BiCop(family = 1, par = par.gauss)
obj.st3 <- BiCop(family = 2, par = par.st3,par2=3)
obj.st8 <- BiCop(family = 2, par = par.st8,par2=8)
```

Figure 1.6: Bivariate copula densities: left: GaussGauss copula density surface with rho=.89

```
plot(obj.gauss,zlim=c(0,12))
```

ate copula densities: middle: Student t with $df=3$ and $\rho=0.89$

```
plot(obj.st3,zlim=c(0,12))
```

Figure 1.6: Bivari-

ate copula densities: right: Student t with $df=8$ and $\rho=.89$

Figure 1.6: Bivari-

```
plot(obj.st8,zlim=c(0,12))
```

Section 1.8: Meta distributions

```

umeta<-BiCopSim(N=200,family=1,par=par.gauss)
x1<-qnorm(umeta[,1])
u1<-umeta[,1]
u2<-umeta[,2]
x2<-qexp(umeta[,2],rate=5)
z1<-x1
z2<-qnorm(umeta[,2])

```

Figure 1.7: Scatter plots of a bivariate sample ($n = 200$) from Gaussian meta distributions: left: $N(0, 1)$ /exponential with rate $\lambda = 5$ margins, middle: uniform $[0, 1]$ /uniform $[0, 1]$ margins, right: $N(0, 1)$ / $N(0, 1)$ margins. The common copula is a bivariate Gauss copula with $\rho = .88$.

```

bigpar(1,3)
plot(x1,x2)
plot(u1,u2)

```

```
plot(z1,z2)
```

Section 1.10: Exercises

Figure 1.8: WINE7: Scatter plots of the seven dimensional red wine data.

```
udata7<-udata[,c(1,2,3,5,7,8,9)]  
pairs(udata7)
```
