The field of gastrointestinal oncology is rapidly developing, on the one hand through the identification of novel molecular targets and therapeutic principles, on the other hand through the establishment and improvement of multidisciplinary treatment strategies. The following manuscript summarizes the most important trial results of the ASCO Meeting 2015 for gastrointestinal cancers. Besides trials on perioperative treatment of esophageal-, pancreatic- and colon cancer, we will present impressive data on new therapeutic strategies such as immunotherapy in gastric-, liver and microsatellite instable colorectal cancer. The trials will be put into context by the authors.
